CIRCUIT DESCRIPTION

VVT system controls the intake valve timing to proper timing in response to driving condition. ECM controls OCV (Oil Control Valve) to make the intake valve timing properly, and, oil pressure controlled with OCV is supplied to the VVT controller, and then, VVT controller changes relative position between the camshaft and the crankshaft.

</table>
| P1349  | Condition (a) or (b) continues for after the engine is warmed up and engine speed at 400 – 4,000 rpm : (a) Valve timing does not change from of current valve timing (b) Current valve timing is fixed. | • Valve timing  
• Oil control valve  
• VVT controller assembly  
• ECM |

WIRING DIAGRAM

[Diagram showing wiring connections between C3, Oil Control Valve (for VVT), and ECM.]
INSPECTION PROCEDURE

HINT:
- If DTC P1349 is displayed, check left bank VVT system circuit.
- Read freeze frame data using TOYOTA hand–held tester or OBD II scan tool. Because freeze frame records the engine conditions when the malfunction is detected, when troubleshooting it is useful for determining whether the vehicle was running or stopped, the engine warmed up or not, the air–fuel ratio lean or rich, etc. at the time of the malfunction.

TOYOTA hand–held tester

<td>NG</td>
</tr>
</tbody>
</table>

PREPARATION:
(a) Start the engine and warmed it up.
(b) Connect the TOYOTA hand–held tester and select VVT from ACTIVE TEST menu.

CHECK:
Check the engine speed when operate the OCV by the TOYOTA hand–held tester.

OK:
- OCV is OFF:
  - Normal engine speed
- OCV is ON:
  - Rough idle or engine stall

OK VVT system is OK.*

*: DTC P1349 is also output after the foreign object is caught in some part of the system in the engine oil and the system returns to normal in a short time. As ECM controls so that foreign objects are ejected, there is no problem about VVT. There is also no problem since the oil filter should get the foreign object in the engine oil.
3 Check voltage between terminals OCV+ and OCV– of ECM connector.

Reference: INSPECTION USING OSCILLOSCOPE
Turn the ignition switch ON, check waveform between terminals OCV+ and OCV– of the ECM connector.

HINT:
- The correct waveform is as shown.
- The waveform frequency (A) is lengthened as the engine speed becomes higher.

NG Check and replace ECM (See page IN–30).

OK

4 Check VVT controller assembly (See page EM–48).

NG Replace VVT controller assembly, and then go to step 5.

OK

5 Check oil control valve (See page SF–50).

NG Replace oil control valve, and then go to step 6.

OK

6 Check blockage of oil control valve, oil check valve and oil pipe No.1.

NG Repair or replace.

OK
Check whether or not DTC P1349 is stored.

**PREPARATION:**
(a) Clear the DTC (See page DI–3).
(b) Perform simulation test.

**CHECK:**
Check whether or not DTC P1349/P1354 is stored (See page DI–3).

**OK:**
DTC P1349 is not stored

   ![Decision Tree]

   **OK**

   VVT system is OK.*

   *

   DTC P1349 is also output after the foreign object is caught in some part of the system in the engine oil and the system returns to normal in a short time. As ECM controls so that foreign objects are ejected, there is no problem about VVT. There is also no problem since the oil filter should get the foreign object in the engine oil.

**NG**
Replace ECM.

**OBD II scan tool (excluding TOYOTA hand–held tester)**

1 Check valve timing (See page EM–18).

   ![Decision Tree]

   **NG**

   Repair valve timing.

   **OK**
2 Check operation of OCV.

PREPARATION:
Start the engine.

CHECK:
(a) Check the engine speed when disconnect the OCV connector.
(b) Check the engine speed when apply battery positive voltage between terminals of OCV.

RESULT:

<table>
<thead>
<tr>
<th>Result</th>
<th>Check (a)</th>
<th>Check (b)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Normal engine speed</td>
<td>Rough idle or engine stall</td>
</tr>
<tr>
<td>2</td>
<td></td>
<td>Except 1</td>
</tr>
</tbody>
</table>

Go to step 4.

3 Check voltage between terminals OCV+ and OCV− of ECM connector.

Reference: INSPECTION USING OSCILLOSCOPE
Turn the ignition switch ON, check waveform between terminals OCV+ and OCV− of the ECM connector.

HINT:
- The correct waveform is as shown.
- The waveform frequency (A) is lengthened as the engine speed becomes higher.

OK VVT system is OK.*

*: DTC P1349 is also output after the foreign object is caught in some part of the system in the engine oil and the system returns to normal in a short time. As ECM controls so that foreign objects are ejected, there is no problem about VVT. There is also no problem since the oil filter should get the foreign object in the engine oil.
Check and replace ECM (See page IN–30).

4 Check VVT controller assembly (See page EM–48).
   NG Replace VVT controller assembly, and then go to step 5.
   OK

5 Check oil control valve (See page SF–50).
   NG Replace oil control valve, and then go to step 6.
   OK

6 Check blockage of oil control valve, oil check valve and oil pipe No.1.
   NG Repair or replace.
   OK

7 Check whether or not DTC P1349 is stored.

PREPARATION:
(a) Clear the DTC (See page DI–3).
(b) Perform simulation test.

CHECK:
Check whether or not DTC P1349/P1354 is stored (See page DI–3).

OK: DTC P1349 is not stored
   OK VVT system is OK.*
*: DTC P1349 is also output after the foreign object is caught in some part of the system in the engine oil and the system returns to normal in a short time. As ECM controls so that foreign objects are ejected, there is no problem about VVT. There is also no problem since the oil filter should get the foreign object in the engine oil.

NG

Replace ECM.
